1915 NEW CROP 1915

50th Summer and Fall Catalogue
and Price List

HIGH GRADE SEEDS
READY FOR DISTRIBUTION

This is only a small portion of the Varieties of Seeds we handle. Catalog for full list on application

J. STECKLER SEED CO., Ltd.

ESTABLISHED 1865

LARGEST SEED HOUSE IN THE SOUTH

512 to 516 Gravier Street.

NEW ORLEANS, LA.

Vegetable Plants in Season, Flowering Plants and Shrubs.

WHAT QUALITY STANDS FOR IN SEEDS.

When you buy a suit of clothes, a hat, or a pair of shoes, you can judge what the quality is and decide whether you are paying a fair price. When buying seeds this is impossible. No one can tell from examination of the seeds whether they have been saved carefully from choice pedigree stocks, or whether they have been produced cheaply to sell wholesale at low prices. In fact, even an expert examination fails to show any difference in appearance between turnip seed worth 50 cts. per lb., cabbage worth \$3.00, or cauliflower seed worth \$40.00 per lb. They all look alike,—but how different the resulting crops!

Buying seeds, therefore, must be entirely a matter of confidence. Every truck-patch or flower-bed, large or small, is the planter's "trial ground."

We desire that our seeds and not your patience shall be tried there.

A record of 50 years is behind us and unless our seeds were good, reliable, fresh and true to name, we would not have been here all these years.

Steckler's Seeds are Best
Best Seeds Always Grow.

STECKLER'S FALL SPECIAL COLLECTIONS.

COLLECTION No. 1.

Twelve Packages of the following Seeds of any of the varieties herein listed for 50 cents: 1 packet Cabbage, 1 packet Beets, 1 packet Carrots, 1 packet Lettuce, 1 packet Radishes, 1 packet Mustard, 1 packet Onions, 1 packet Turnips, 1 packet Parsley, 1 packet Beans, 1 packet Peas, 1 packet Celery.

COLLECTION No. 2.

For One Dollar we will send you 25 Packets of Seeds, any variety of your own selection, of which 19 packets can be Vegetable Seeds and 6 packets Peas and Beans.

FREE OFFER FOR FLOWER SEEDS.

BEAUTIFY THE SURROUNDINGS OF YOUR HOME AND
MAKE IT ATTRACTIVE.

For every One Dollar purchase we will send Free 4 Packets of Assorted Flower Seeds, your own selection.

WE SOLICIT CORRESPONDENCE IN FRENCH, GERMAN, SPANISH, ITALIAN, OR, IN FACT, ANY LANGUAGE.

PLANTERS' AND GARDENERS' PRICE LIST.

WE DO NOT CHARGE FOR BAGS OR BOXES.

Seeds Postpaid by Mail.

Please bear in mind that prices quoted in the following list include prepayment of postage on all seeds ordered by packet, ounce, quarter-pound, pound, quart and pint.

Please bear in mind that prices quoted in the following list include prepayment of postage on all seeds ordered by packet, ounce, quarter-pound, pound, quart and pint.

If ordered to be sent by express or freight, deduct 10 cents per lb. from mail prices quoted.

Larger Quantities than pounds or pints will be sent by express or freight at purchaser's expense. Postage on Bulbs, Flowering and Vegetable Plants, add 20% of their value.

The rate of postage on seeds, plants, bulbs and roots mailed within the United States and possessions; Alaska, Canal Zone, Guam, Hawaii, Porto Rico and the Philippines remains the same as heretofore, viz.: 12 cents per pound or fraction thereof, though the maximum weight of a mailable package may now be eleven (11) pounds, and the size seventy-two (72) inches for combined length and girth.

On the receipt of \$1.00 we will mail fifteen large size papers of seeds, put up the same as seeds sold by the pound. These papers can be selected from this catalog. Or, for the same amount, we will mail 24 smaller papers. This is done to enable customers to get reliable seeds in good size papers in places where our seeds are not sold.

Our system of conducting business is to give satisfaction to our customers, which we always guarantee.

Our Terms—Cash or satisfactory reference. Orders from unknown parties whose financial rating is not recorded, must be accompanied by a draft on New Orleans, Registered Letter or Money Order. Where neither of the above can be obtained, send remittance in United States postage stamps. Stamps must be in good order, and placed so they will not stick together. No Plants or Live Stock sent C. O. D. by Express.

When ordering write your name plainly, give correct P. O. address if by mail, if by express give your express office or nearest express, to avoid any delay; also if by rail or boat give station or landing and if possible the name of railroad or name of boat. Where no instructions are given as to how shipment should be made, we will use our own discretion, but we urge all customers to state plainly whether they want goods mailed, expressed, or shipped by boat or by rail. As all shipments by boat must be prepaid, customers not known by us must remit enough to cover freight.

This Company gives no warranty, expressed or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs or plants we send out, and we will not be in any way responsible for the crop. If the purchaser does not accept the goods on these terms, they are at once to be returned.

All C. O. D. orders must be accompanied by at least half the amount.

CROSBY'S IMPROVED EGYP-

TIAN BEET.

More largely planted for early market in the South than any other kind, and has proved a most profitable and satisfactory crop, particularly with our truckers and large shippers to Northern markets. The beet is of very handsome form, good size, small tops and small tap-root, and above all, of very quick and rapid growth. The shape is very desirable, being not quite so flat as the ordinary Egyptian, nor quite as round as the Eclipse. It takes on its turnip shape even in very early stages of its growth, a decided advantage both for forcing and early cropping, which accounts very largely for its popularity.

**Use
CORONA DRY
for all Leaf-Eating Insects on all
Vegetable Plants.**

It is a well-known fact that

STECKLER'S CABBAGE SEED

gives better satisfaction and heads with greater certainty in the South than any other. The reason of this is that we grow all our seed from selected heads, giving their selection and cultivation personal attention.

FROTSCHER'S SUPERIOR LARGE LATE FLAT DUTCH CABBAGE.

This is the most popular variety for winter cabbage, and cultivated by almost every gardener who plants for the New Orleans market. Heads are large and solid, often weighing from 15 to 25 pounds. Plant during July and August. We have tried seed of the Flat Dutch from different growers, but have found none yet to equal the stock which is raised for us by contract.

STEIN'S EARLY FLAT DUTCH CABBAGE.

This is one of the earliest cabbages for its size. The demand for the seed has steadily increased since it was introduced. It is a sure header, very regular and well adapted for shipping. Is planted exclusive of all other kinds by some of the largest cabbage growers.

**When you buy from Steckler

Early Snowball.

EARLY SNOWBALL CAULIFLOWER.

The earliest maturing strain of the true short-leaved Snowball type of Cauliflower. It is admirably adapted for forcing or wintering over for early crop and is the most popular sort for these purposes, also one of the best sorts for late summer and fall crop. Early Snowball is, moreover, a most desirable sort for the home garden. The plants are compact, with few short, outside leaves and are well suited for close planting. The heads are of medium to large size, solid, compact, round, very white and curd-like and are developed earlier than those of any other sort. Our stocks of Early Snowball are unsurpassed by any in earliness. They also gave the highest percentage of well formed heads. After a careful inspection of the fields of the most expert Danish and other European growers we know we are in position to supply the most critical trade with seed which can be depended upon as the very best.

Collards.

COLLARDS.

These slightly resemble cabbages in growth and appearance, and are largely planted in the South for use as boiling-greens during the winter months and also to furnish green forage for poultry and stock in the winter. The young plants can be started in a seed-bed, and when large enough transplanted to regular rows like cabbage. It forms a mass of leaves on a tall stem, and in the South continues in growth all winter. As the leaves are pulled off, the stem increases in height, bearing new leaves. Two to four ounces should produce sufficient plants for one acre.

**LARGE
PURPLE
OR**

**NEW ORLEANS
MARKET
EGGPLANT**

COPYRIGHTED 1890 BY R. FROTSCHER

This is the kind mainly grown here, is large, oval in shape and of a dark purple color and very productive. Southern grown seed of this, as a good many tropical or sub-tropical vegetables, is preferable to Northern seed, as it will germinate more

readily, and the plant will last longer during the hot season. It is the best variety for shipping, superior to the Northern raised kinds. It carries better. The cut is made from three specimens, and represents the true form.

EGG PLANT.

Steckler's New High Bush	.35	1.00	3.75

ENDIVE.

Endive is used largely as a salad during the cool fall, winter and early spring months. The leaves have a slightly pungent flavor which somewhat resembles that of the dandelion. The finely cut leaves are quite ornamental in appearance. The plants are very attractive when blanched, so as to show a white or golden-yellow center surrounded with green. This is accomplished by gathering the outer leaves closely together and tying loosely with soft twine or a wisp of straw for a week or ten days in advance of the time you wish to use them.

BROAD LEAVED BATAVIAN
ENDIVE.

Is known as **Escarolle** in the South. It has broad thick leaves with rounded ends, much larger in size and not deeply fringed like the preceding sorts. This is used in the natural state as an appetizing and most wholesome salad, and is also used for a boiling-green to be cooked like spinach.

One ounce will sow about four hundred feet of row.

GREEN CURLED ENDIVE.

Green Curled is the hardiest variety and has deep green leaves, finely cut or fringed. **Giant Fringed**, or "Oyster" is similar in appearance, but grows to a larger size, with longer leaves. **White Curled** is similar to the Green Curled, but the leaves are naturally of a light golden tint and they do not have to be tied up to blanch them for table use.

FENNEL FLORENCE OR
NAPLES.

(*Fennoul de Florence, Finocchio di Napoli*)

Culture: Sow in spring in rows 16 to 20 inches apart. Thin out so as to have the seedlings 5 to 6 inches apart, and water as plentifully as possible. The plant is usually eaten boiled. In flavor it resembles Celery, but with a sweet taste and a more delicate odor.

Big Boston Lettuce.

BIG BOSTON LETTUCE.

Our strain of this very popular variety is unsurpassed. Thousands of acres of Big Boston Lettuce are grown annually in the South. Plants are large and vigorous, leaves light green, slightly tinged with reddish brown; stands very long before shooting to seed. Can be grown in the open ground, in the spring or fall, or in frames for early spring planting, does particularly well in cold weather and is especially recommended for fall planting in the South. Is very popular with gardeners and truckers, because it always produces large, solid, salable heads; and with private growers because it heads up at all seasons of the year and is of crisp tender quality.

We are agents for Cyphers Incubators, Feeds, etc., also Chamberlain's Perfect Hen and Chick Feed. Write for prices.

LOUISIANA OR RED CREOLE ONION.

Has been cultivated here for a century—supposed to have been brought here first from the south of Europe. It is not as red as the Wethersfield, and not as light as the Strassburg; in flavor it is similar to both varieties, but much stronger than the Italian kinds. In this latitude the seed should be sown from the 15th of September to about the 25th of October; if sown sooner, a good many will throw up seed stalks, which impairs the keeping qualities of the onion. We sow the seed broadcast, protect the seed beds by spreading green moss over them, which is removed every evening and replaced in the morning. Some gardeners use lataniers for covering the bed. When the seed is coming up, say in 7 or 9 days, the cover has to be removed entirely; but if the weather is dry the watering has to be continued. They thrive best in loamy soil. Can be planted in the same ground for years, and require no rotation as other crops. When the plants have reached the size of a goose quill they are transplanted into rows, which can be from one to two feet apart, according to the mode of cultivation, and about five or six inches apart in the rows. The ground should be prepared before setting out the plants. We generally shorten the tops and roots. In April the onion will be ready to be taken up. In sections where it is too cold to sow onion seed in the fall, the Creole seed can be sown in January and February; in that case they should be sown very thinly in drills, thinned out to a proper stand, and by the end of spring they will

produce good size onions. The seed of the Creole Onion, which we offer, is grown for us by experienced onion growers. No better stock can be found.

CRYSTAL WAX ONION.

This variety is the best white onion we have ever seen. It is of a pure white and sells on sight. Should be planted in rich soil; if left exposed to sun after ripening they turn to a greenish color. Excellent for shipping and the finest flavored onion in existence.

BERMUDA WHITE OR YELLOW ONION.

Extra early, a heavy cropper and the mildest flavored of all onions. Suitable for planting in all parts of the South in the spring. If you want sweetness and mildness in an onion this is the right variety. While usually called White Bermuda, it is really a light straw color. Plant this spring.

RED BERMUDA ONION.

Genuine seed imported direct from the Island of Teneriffe. A very early pale red onion grown extensively in the Bermudas and southern parts of the United States for early shipping to Northern markets. Grown in our climate the bulbs are smaller, but mature early and retain much of the extremely mild, sweet flavor of the imported ones.

We also advise planting Onion Sets, as they will give you onions three weeks or 30 days sooner than if you planted the seed, and the early onions get the price.

LIVINGSTON'S STONE TOMATO

An excellent variety; one of the best and most desirable for our truck farmers. Thousands of bushel boxes are annually shipped from Florida to Southern and Northern markets, and no variety gives better satisfaction than this. For shipping it cannot be surpassed. The fruit is of the handsomest, brightest scarlet; more globular in shape than the Beauty or Favorite, and perfectly smooth and glossy. One of the best varieties for our climate. Recommended by the Louisiana Agricultural Experiment Station for canning.

We are prepared to fill large orders in any quantity. Write for Special Prices.

EARLY WHITE FLAT DUTCH TURNIP.

(Strap-Leaved.)

This is the earliest variety, and can be sown either broadcast or in drills; it is, without exception, the best and most popular sort for either table use or for market; is of a beautiful flat form, of pure white color, and of a delicate, mild flavor; it produces bulbs entirely free from small roots and with long narrow strap-leaves, growing erect, which permits close culture.

Special Prices Quoted on Large Orders.

FARMOGERM

(High Bred Nitrogen Fixing Bacteria) is put up in bottles in the following sizes:

Regular or Farm Size	5 acres	\$6.00
Farm Trial Size	1 acre	2.00
Garden Size for Peas and Beans only	¼ acre	.50

For the following crops in acre sizes: Red Clover, Mammoth Clover, Crimson Clover, White Clover, Burr Clover, Sweet Clover, Alsike, Alfalfa, Peanuts, Vetch, Garden Beans, Garden Peas, Sweet Peas, Cow Peas, Canada Field Peas, Soy Beans and all other legumes.

In garden size for Peas, Beans and Sweet Peas; also a mixed culture good for all three. In ordering state what crop you wish to plant; quantity wanted, and ask for book on the

Farmogerm Method.

Plant your Strawberry and Artichoke plants from October 1st. Well rooted plants. Now don't be governed by cheap prices. Get good, strong plants, and true to name. Plants of all kinds are best sent by express.

Do Not Forget:—We are prepared to make Specially Attractive Quotations on Large Orders for any of the Seeds quoted in this list.

FROST PROOF CABBAGE PLANTS FROM STECKLER WILL SURELY MAKE GOOD.

Early Jersey Wakefield.

This is the hardiest and hardest heading of the extra early sorts, and most Northern gardeners depend upon it for their first crop.

Charleston Wakefield.

This sort forms uniform solid heads, considerably larger than the Early Wakefield and matures only a few days later. On clay ground it will mature just as early. Largely planted by gardeners in the South.

Succession.

A second early—about two weeks later than Wakefield. The color is light green; the heads are solid, are good keeping and are of excellent quality. A favorite with market gardeners.

Early Flat Dutch.

A sure header, weighing from 10 to 12 pounds, of even size and solid. They mature about as early as Succession, and stand long without bursting. This is one of the best of the second early kinds.

There are a number of islands along the South Carolina sea coast where the soil and climatic conditions are just suited for growing tough, hardy cabbage plants during the winter and early spring. The plants make a slow but steady growth, until at eight to ten weeks of age they are very tough and hardy, the buds are purple and the outer leaves a reddish-brown. When in this condition they can be shipped to territory further north and be planted in the open ground a month to six weeks sooner than the home-grown hotbed or cold frame plants could be planted. These **Frost-Proof Cabbage Plants** will stand a temperature of 8 to 10 degrees above zero without injury, the land freezing, or the plants being covered with ice, sleet or snow after they are planted will not injure them.

The top of the plant does not grow until your regular spring weather opens up, but the roots grow from the time they are planted, and just as soon as spring weather starts, the established root growth assimilates the fertilizer in the soil, the plants grow very fast, maturing headed cabbage ten days to three weeks sooner than you can mature them from hotbed and cold frame plants. You know what the difference in profit will be if your crop is matured and marketed before the general crop from home-grown plants is matured.

To Get the Advantage of These Frost Proof Cabbage Plants They Must be Planted a Month or Six Weeks Earlier Than You Would Plant Home-Grown Plants.

Our cabbage plants are grown from the best Long Island grown seed and are shipped direct from our growing station in South Carolina by parcel post or express. We can fill orders from January 1st to April 15th.

The plants will be somewhat wilted and have a hard, stunted appearance, which will be disappointing to persons who have never used these plants before. Regardless of appearance, they will produce the crop results. **We guarantee good order delivery. You have all to gain; nothing to lose.**

Varieties: Early Jersey Wakefield, Charleston Large Type Wakefield, Succession and Early Flat Dutch.

PRICE, BY MAIL, POSTPAID—500 for \$1.50; 1,000 for \$2.75; 2,000 for \$5.50.

BY EXPRESS, NOT PREPAID (No Plants Sent C. O. D.) Price, 500 for \$1.00; in lots of one to four thousand \$1.50 per thousand; 5,000 to 9,000 lots at \$1.25 per thousand. For express shipment not less than 500 plants of a variety sold. Packed 500, 1,000 and 2,000 to the crate, one variety in each crate.

They weigh about twenty-five pounds per thousand plants packed for shipment.

TERMS CASH WITH ORDER—No plants shipped C. O. D. We advise that you have all shipments of two thousand plants or less sent by parcel post. They make quicker time, are delivered by the mail carrier, and save you the time of going to the express office for the shipment. On larger lots inquire of your express agent what the charges will be. To a great many points the parcel post rates are as low or lower than the express rates. When rates are near the same always order by parcel post, as time and service is better.

Please bear in mind that all the prices quoted in this list include prepayment of postage on all seeds ordered by packet, ounce, quarter-pound, pound, quart and pint.

HOME GROWN VEGETABLE PLANTS.

During the proper season we will have all varieties of vegetable plants on hand suitable for our climate, and will be prepared to fill orders on the shortest notice, providing the weather permits.

Due to the very poor condition in which vegetable plants reach destination in early fall, it is useless to ship them until the weather cools, which is after the 15th of October. Any plants shipped prior to this date will be shipped entirely at purchaser's risk.

For any of the above plants by mail, add 20 per cent. to cover postage.

To grow vegetable plants of any kind, put Kainit on the ground about 6 weeks before the seed is planted, at the rate of 600 to 800 pounds per acre. The above preparation is to avoid cut and ground worms.

STRAWBERRIES FOR SOUTHERN GARDENS.

Strawberries are considered one of the most profitable crops that any farmer or gardener can grow. There is a greater profit per acre for the money and time expended than can be made from any other crop. Some growers have reported as high as

\$1000.00 per acre and some even higher than that. The usual profits run from \$300.00 to \$1000.00 per acre when the proper attention is given to them.

There are many localities all over the South where strawberries can be grown for home market with splendid results, then there is big money in growing them for the Northern markets, and aside from this every tiller of the soil, from those who have a small garden in the back of their city lot to the large farmer, should produce enough berries for their own table. A few hundred plants, if there is not room for more, will help wonderfully towards this, but a larger patch is better.

Commercial strawberry growing is flourishing throughout the South and there is room for many more acres. This is a nice, easy, clean crop to grow and handle and is one that the women and children delight to work in.

You should use the best plants for your strawberry bed and we are prepared to supply you with the best plants grown. The Klondyke is the leading Southern variety and is the one that is and should be planted most extensively. The Missionary is considered the best early Southern variety and the Aroma and Gandy for late. These varieties are the ones that should be used for best results. Many of the old time varieties have given away to these new and better kinds. The best time to plant is from October 15th to March 1st. The ground should be well prepared and fertilized, the rows should be three feet apart and the plants one foot apart in the row; they should be well cultivated and all weeds and grass kept hoed or pulled out.

Every farmer should order some plants at once for a home garden if not for home market or commercial strawberry growing. He should have all he needs for his own table, if not more. If the strawberry bed is overlooked by the head of the family the wife should see to it that there are strawberry plants ordered for a garden patch for home use. Strawberries will grow and thrive anywhere in the South, then why be without them?

SOUTHERN GARDEN ASSORTMENT.

300 Plants, Postpaid, \$1.75.

For \$1.75 we will send 300 Strawberry plants, postage prepaid, to any post office in the United States. In this collection will be 150 Klondyke, the best medium-early, large-sized, sweet flavored berry; 150 Aroma, which is of enormous size, finest quality, and stays in bearing late, long after other varieties are through. This selection contains the best there is to be had in Strawberries to date.

OUR ONE-DOLLAR ASSORTMENT.

150 Plants, Postpaid, \$1.00.

If you don't want as many as 300 plants, our One-Dollar Strawberry Assortment is just the thing for you. Plants of exactly the same quality as in the Southern Garden Assortment, the same varieties: 75 Klondyke, 75 Aroma, postpaid to any post office in the United States for \$1.00.

DELIVERY ABOUT OCTOBER 15. Plants will not be shipped until they become dormant—about October 15. We want the plants to reach you in first-class order, which is possible only when digging and shipping is delayed until growth has stopped. We positively will not ship until the plants are in condition to carry in the very best manner. Orders can be sent in any time.

Please bear in mind that all the prices quoted in this list include prepayment of postage on all seeds ordered by packet, ounce, quarter-pound, pound, quart and pint.

FALL BEARING STRAWBERRIES.

You can have strawberries just as easily in the fall as in the spring by planting the Superb Strawberry, which is the best of all the fall or ever-bearing strawberries. This variety will produce heavy crops in the fall of as fine berries as any spring-ripening strawberries. Truly a luxury for home and profitable for market. Think of having all the berries you can use on your table during the months of September, October and November and later, if not killed by freezing weather.

If you grow them to sell you can get your own price for strawberries at that season of the year and there is no strawberry known that is so prolific as the Superb. It commences blooming early in the spring and the blooms should be kept removed until about the middle of August. By doing this you get a larger yield in the fall than you would if allowed to bear all summer. So prolific are they that the young plants that are formed in the summer will bear in the fall of the same year; in fact, the young plants will very often send up fruit stems before they become rooted. They are not a novelty nor an experiment, but are a success and you can have strawberries as well in the fall as in the spring—strawberries of good quality for your table every day during the late summer and fall; strawberries for Thanksgiving. Many who read this have no doubt heard of fall-bearing strawberries. Many have not. Remember, we are living in an age of rapid advancement that is giving us things that a few years ago we never thought of.

Fall Bearing Strawberry Plants.

Superb..... 12 for 75c. 25 for \$1.50 50 for \$2.00 100 for \$3.50.
Special prices in large quantities.

Please bear in mind that all the prices quoted in this list include prepayment of postage on all seeds ordered by packet, ounce, quarter-pound, pound, quart and pint.

PATTERSON RED RUST PROOF OATS.

(Louisiana Grown.)

Standard weight 32 lbs. to the bushel, but frequently these oats weigh as high as 38 lbs., as they are very plump and heavy. There are no better oats than the Louisiana Red Rust Proof. They are very prolific and more than 75 per cent. of the oats grown now in the Southern States are oats that were originally brought here by Rev. R. I. Patterson, who settled in Louisiana right after the war. He brought with him some Northern oats and by continually saving the same oats and improving them, he has produced an oat that will resist all diseases year after year. Through this process this oat has been produced to resist the rust, and is known as the Louisiana Red Rust Proof.

Farmers should become posted and be more careful in purchasing seed oats. Our strain of oats has been carefully selected from the very best stock obtainable, and from the most vigorous and largest plants.

We have been handling this variety for a number of years and it has given satisfaction wherever grown. These oats are as true and uniform in color, quality, time of ripening and stooling as any oats that can be had. It is without doubt the best variety for Southern planters. While some of our farmers have repeatedly yielded up to 100 bushels per acre, it is

safe to say that from 50 to 75 bushels would be an average crop.

Sown in the fall these oats make a splendid winter pasture, which does not prevent it from making a full crop in the spring. It nearly always stands our winters. It is stated that even a half stand of fall sown oats yields more than a full stand of spring sown oats.

Plant from October first on, at the rate of 2½ to 3 bushels per acre. We consider these oats the best that we have ever seen. Sample of seed will be sent on application.

Price, peck, 50c., bushel \$1.00, in lots of 50 to 100 bushels 90c. per bushel.

CITRUS TRIFOLIATA.

It has become of great importance as a stock for citrus trees of all kinds. Varieties budded on it are made hardier because of its dormant and hardy character, and the fruit is of exceedingly fine quality, ripening two or three weeks earlier than if budded on other stocks. It has been claimed that it dwarfs the trees budded upon it, but the tests of years in our test groves have not proven this to be so, except in the case of a few varieties. For the Satsuma orange, it is the only stock to use.

This seed is planted in the fall and spring. We find, however, through experience that the seed planted from July 15th does the best, as the seed should be planted as soon as possible after being taken out of the orange; by winter the plants are already 4 to 6 inches high and gives them a fine start for early spring. Price, clean seed, 1 pound, \$1.00; 5 pounds, at 90c. per pound; 10 pounds and over, at 80c. per pound. Seed in the fruit or orange, 1 pound, 30c.; in 5 pounds, at 25c. per pound; in 10 pound lots and over, at 20c. per pound.

Sour Orange Seed, single pound, \$2.50; in 5 pound lots, at \$2.25 per pound; in 10 pound lots and over, at \$2.15 per pound.

Sweet Orange and Grape Fruit Seed.—Same price as Sour Orange Seed.

Pecan and Orange Buds of all varieties bred from July to September 1st.

RYE.

(Southern Grown.)

It stools heavily, can be grazed several times and then allowed to go to seed. Cut and fed green, has made as much as 10 tons of green food per acre in five months. Rye grown in Tennessee, Virginia, and the North and West is cheaper, but it is spring sown and often runs along the ground. It is slow growing and is not so good here. It is an entirely different type to our Southern Rye.

Rye is extremely hardy, and will grow on the poorest kind of land. It makes the finest kind of winter and spring pastureage, and if sown early can be grazed until late fall. If cut when in bloom, or before fully headed out, it makes a fair quality of hay, and when used for grain, the straw is excellent for bedding purposes.

It is a very hardy plant, withstanding all kinds of very cold weather without serious injury. The ground should be well prepared before you sow; plant early, thus giving the young plants plenty of time to get a good stand. Sowed both broadcast and in drills. The seed should be covered no more than two inches.

For hogs, sow from September 10th to November 1st, together with crimson clover. Graze from December 1st to April 15th. Rye can be planted for late fall and winter grazing at the last laying by of cotton.

SWEET PEAS.

Culture: Sweet Pea delights in a soil inclined to be clayey, and, as the little beauty is a gross feeder, a good supply of well-rotted manure should be mixed with the ground. Fall is the best season to prepare the soil. A good many failures are caused by manuring in the spring, for the reason that all pea vines like a moist ground, and the heat generated by the manure combined with the heat from the sun is too much for the young vines, which turn yellow and die. The best season to sow the seed is as soon in the spring as the ground can be worked. Late sowing produces rank growth, but few flowers. Dig a trench a foot deep by 16 or 18 inches wide and mix in it 6 inches of top soil with old manure. In this plant your seed in two rows, dropping one every inch or two; then cover with two inches of soil, gradually filling the trench as they grow. One side has to be a little lower to allow the surplus water to drain off. The flowers must be picked every day if you want them to bloom through the summer. Bone dust and nitrate of soda will hasten the time of flowering.

BEST LARGE FLOWERING MIXED.

All Grandifloras and Eckford Varieties.

This is the best possible mixture that can be made from existing grandiflora or Eckford varieties. The colors are well proportioned, and the amount of each variety is determined by a well studied and carefully arranged formula which has been tested and improved upon from time to time for many years. All the newer and best grandiflora varieties are in this mixture. Packet, 5c. and 10c.; ounce, 20c.; $\frac{1}{4}$ pound, 60c.; 1 pound, \$1.35.

Emily Henderson (Pure White).—An early, profuse, and continuous bloomer. Paper, 5c. and 10c.; ounce, 25c.; $\frac{1}{4}$ pound, 50c.; 1 pound, \$1.50.

Winter Blooming Sweet Peas.—Lavender, Mr. Chas. H. Totty. 1 ounce, 25c.; $\frac{1}{4}$ pound, 75c.

Winter Blooming Sweet Peas.—Light Pink. Mrs. F. J. Dolansky. 1 ounce 25c.; $\frac{1}{4}$ pound, 75c.

Christmas Blooming Sweet Peas.—White. Mont Blanc. 1 ounce, 25c.; $\frac{1}{4}$ pound, 75c. Lavender, Mrs. Alexander Wallace. 1 ounce, 25c.; $\frac{1}{4}$ pound, 75c.

Von Sion Narcissus.

LIST OF FLOWERING BULBS FOR FALL, READY AFTER SEPTEMBER 15th.

New Oxalis Buttercup, 40c. per dozen. Crocus, mixed, 25c. per dozen, \$1.50 per 100.

Anemones, 30c. per dozen, \$1.50 per 100. Freesia Refracta, mixed, 25c. per dozen. White Roman Hyacinths, 5c. each or 50c. per dozen.

Assorted Dutch Hyacinths, all colors, 5c. each, 55c. per dozen.

Jonquils, 5c. each, 40c. per dozen. Narcissus, Paper White, 5c. each, 40c. per dozen.

Narcissus, Trumpet Major, single, 5c. each, 40c. per dozen.

Narcissus, Double Von Sion, 5c. each, 40c. per dozen.

Narcissus, Giant Princeps, 5c. each, 40c. per dozen.

Chinese Sacred Lilies, 10c. each. Tulips, Double and Single, 5c. each, 40c. per dozen.

Spanish Iris, 25c. per dozen. Add 25 per cent. of their value for postage.

THE CYCLONE SEEDER.

Low Priced, But Guaranteed Absolutely.

The average cost of a peck of clover seed will buy a Cyclone Seeder—and a Cyclone will save you that much in a six-acre sowing. It's the most comfortable seeder to use you ever saw, too. Shaped to fit the body, it's held against the left side by a strap over one shoulder—there is no neck strap and your hands are in a natural position. And it surely does the work! Stand up, too—season after season. Better get one for your next sowing. Price, only \$1.50 each, not prepaid.

Please bear in mind that all the prices quoted in this list include prepayment of postage on all seeds ordered by packet, ounce, quarter-pound, pound, quart and pint.

"CORONA DRY"

Arsenate of Lead

The "Standard" for Convenience, Economy, Efficiency

For the
Wet Application

LARGEST AND MOST PROGRESSIVE GROWERS HAVE RENDERED THE VERDICT.

The ease with which Corona mixes in water makes preparing for the spraying application a simple as well as accurate operation. It is unnecessary to make a paste of Corona and pass it through a strainer to know that the lumps are thoroughly broken up. Experience has shown that it is only necessary to shake the proportional amount of Corona into the spray tank and the agitator will quickly make an even and smooth mixture. For example, in spraying for codling moth, fill the spray tank with 100 gallons of water; weigh out two pounds of "Corona Dry" and shake it into the tank; a short period of agitation will give a thorough mixture ready to apply on the trees. A measure sufficient to hold the proportional amount of Corona to the water in the tank will do away with the weighing each time. Always add Corona to the water.

These directions call for the high limit to be mixed with 100 gallons of water:

Apple, 2 lbs.—Codling Moth, Curculio, Leaf Skeletonizer, Canker Worm, Tent Caterpillar, Leaf Crumpler, Bud Moth, Slug, Case Bearer.

Shade Trees, 2 to 4 lbs.—Gypsy, Brown Tail, Tussock, Elm Leaf Beetle.

Pear, Peach, 1½ lbs.—Codling Moth, Slug, Canker Worm, Curculio.

Plum, 1½ lbs.—Curculio, Gouger.

Grape, 2 lbs.—Vine Flea Beetle, Berry Moth, Root Worm.

Small Fruits, 2 lbs.—Crown Borer, Leaf Roller, Root Worm, Worm (Currant), Fruit Worm, Steely Beetle.

Potatoes.—Use 2 to 2½ pounds to 100 gallons of water. One spraying should kill most of the bugs in 12 hours and all of them in 24 hours.

Tobacco.—A dosage varies from 3½ to 5 pounds per acre. If applied as a spray, use 3 to 4 pounds in 100 gallons of water.

PREVENT INSECT PESTS ON VEGETABLES, FRUITS, FLOWERS, SHRUBS AND TREES.

Try the best known method of protecting your plants. Use "Corona Dry" dusting powder and put an end to insect pests. This universal insecticide prevents their getting a start, or destroys them after they appear.

Ideal for the home garden, small and large fruits, flowers and ornamental trees and shrubs. Kills all leaf-eating insects on ornamental and fruit trees. Does not "burn" the foliage.

BEST FOR POTATO BUGS.

Superior to Paris Green because it covers the plant much more thoroughly. You can do the work twice as fast. It gets under the leaves better and kills the hidden bugs. Rain does not wash it off easily. "Corona Dry" is applied in dry dust form with a hand duster. The work can be done at any time of day. Keep it on hand. Will not lose strength. Absolutely safe to use.

"Corona Dry" kills Corn Ear Worms, Currant Worms and dozens of other pests. **SELLING PRICE:** ½-lb. carton, 25c. each; 1-lb. carton, 40c. each; 5-lb. carton, \$1.75 each; 10-lb. carton, \$3.00 each. Also packed in 25-lb., 50-lb., 100-lb. and 200-lb. lots, prices on application.

CORONA DUSTING SULPHUR FOR FUNGUS PESTS.

PURE REFINED SUPERFINE FLOUR SULPHUR.

No other ingredients.

This pure sulphur is especially prepared for dusting. It can be used for all purposes of commercially pure sulphur. There are many insects, and even more fungus diseases, that have no known remedies at the present time. The fungus diseases are the harder of the two to handle, but some of the most common ones can be easily controlled by the use of an efficient sulphur product.

METHOD OF APPLICATION: "Corona Dry" and Corona Dusting Sulphur are applied to growing plants, trees, shrubs, etc., in exactly the same way. The dry powder is placed in the powder reservoir of the powder gun, or duster, and is blown over the foliage. The dust is so light, fine and uniform that it comes out in a cloud, and spreads over the plant much more rapidly than wet sprays can be applied. The foliage and fruit is covered with the protective dust very completely, and in about one-fifth of the usual time. The dust sticks just as well as a wet spray, and gives a much more even and thorough covering. In fact, dusting methods have proven far superior to wet methods, for control of many insect injuries such as codling moth, etc., and the danger due to injury from "burning" has been practically eliminated.

PRICES: 10-lb. package, \$1.50; 5-lb. package, \$1.00; 1-lb. package, 25c.; ½-lb. package, 15c. If by mail, add postage according to zone.

SCHNARR'S INSECTICIDE.

Whitefly and Scale Destroyer.

Effective against Whitefly, Purple Scale, Long Scale, Brown Scale of Citrus Fruits, San Jose Scale, Maple Scale, Gloomy Scale, Oak Scale of Deciduous Fruits and Shade Trees. Tested and recommended by Alabama Experiment Station and Government Officials. Prices: 1 bbl. 50 gals. at 50c. gal.; $\frac{1}{2}$ bbl. 25 gals. at 60c. gal.; 10 gallons at 75c. gal.; 5 gallons at 85c. gal.; 1 gallon at \$1.00 gallon; half gallon, 60c.; 8 ounce bottle, 15c. Manufactured by Insecticide Department, Van Antwerp Drug Corporation, Mobile, Ala. We are Sole Agents for Louisiana and New Orleans Exclusively.

TARGET BRAND SCALE DESTROYER.

For white fly, orange scale, oyster shell scale, oleander scale, red scale, black scale, soft scale, young San Jose scale and scurvy bark louse, on orange and citrus trees, as well as mites, aphides and other lice, on house plants, rose bushes, etc., but cannot be used on vegetables. When and How to Spray: Any time after the leaves begin to drop in the fall, spray as thoroughly as possible every part of the trees, using a nozzle that makes a fine mist, and diluting one gallon of Target Brand Scale Destroyer with nineteen gallons of water. For White Fly, one gallon to 50 gallons of water. Prices, 1 gallon can, \$1.00; 5 gallon can, \$3.75. Express or freight only.

STECKLER'S TOBACCO DUST.

The best and most inexpensive insecticide and fertilizer of the day, and one of the most effective agents against the cabbage fly and worms which are so injurious and destructive to Cabbage and Cauliflower plants, and to Cucumbers and Melons. Used by the largest cucumber growers with satisfactory results. We have had opportunity to have a thorough test of our Tobacco Dust on chicken lice, and have found it to be the best insecticide for henries, under setting hens, etc. We have had it tested by a number of poultrymen, who pronounce it to be the best agent against poultry vermin. Also for insects on Flowering and Vegetable Plants; in fact, for all live plants. In addition to the advantageous results of the Tobacco Dust as an insecticide, it is one of the best fertilizers. It is as good as a commercial fertilizer, used at the rate of 300 lbs. to the acre. It is worth 15c. per lb.; 3 lbs. for 25c.; 10 lbs. for 60c.; \$2.00 per 100 lbs.; \$19.00 per 1,000 lbs.. put up in sacks.

TOBACCO STEMS.

Next to our fine Tobacco Dust the stems are extensively used as an insecticide by thoroughly boiling them down to a strong decoction, thus extracting all the strength from them, using the liquid for spraying. The stems are also strewn around the plants, permitting the rain and the sun to strike them, which causes a kind of suffocating steam to emanate from them, killing all insects infecting the plant. Price, 10c. per pound; 10 lbs. for 80c.; \$2.50 per oat sack.

HAMMOND'S SLUG SHOT.

An excellent article for destroying cabbage fleas, green lice, turnip and beet fly, potato bug, grub worm, etc. It is ready for use, and only requires to be dusted on to the plants while they are wet with the dew in the morning; or, when applied in the evening, plants should be watered over the leaves half an hour before the Slug Shot is applied. Five-pound packages, 40c., in bulk, \$7.00 per 100 pounds. Single pound, 10c. Have Dusters for distributing the above powder. Price, one gallon size, 60c.; $\frac{1}{2}$ gallon size, 50c. Add postage according to zone.

Hammond's Bellows for Slug Shot, \$2.00 each.

GRASSELLI'S INSECTICIDES.

Do not wash off easily and are very effective in destroying all kinds of insect life on growing plants.

GRASSELLI'S ARSENATE OF LEAD PASTE.

100-lb. kegs at 14c. per lb.; 10-lb. keg at 22c. per lb.; 5-lb. keg at 25c. per lb.; 1-lb. jars at 30c. per lb. Add postage according to zone.

GRASSELLI'S ARSENATE OF LEAD POWDER.

100-lb. kegs at 34c. per lb.; 50-lb. kegs at 36c. per lb.

GRASSELLI'S BORDEAUX MIXTURE PASTE.

100-lb. kegs at 9c. per lb.; 10-lb. kegs at 14c. per lb.; 5-lb. kegs at 25c. per lb.; 1-lb. jar at 25c. per lb. Can be sent by Express only.

FISH OIL SOAP.

Very effective for washing trees. 25c. per pound, postpaid.

GOOD'S CAUSTIC WHALE OIL SOAP.

25c. per pound, postpaid; in barrels and half barrels, 8c. per pound. Used very largely for spraying fruit and shade trees.

COPPER SULPHATE OR BLUE STONE.

20c. per pound, postpaid; 10 pounds, not postpaid, at 14c. per pound. For early spraying of vegetables use 6 pounds to 50 gallons of water, and spray as often as you think necessary.

WHY

You should read a farm paper suited to your everyday needs and not to "any and everybody's" needs.

MODERN FARMING IS YOUR OWN HOME PAPER—ITS INTERESTS ARE YOUR INTERESTS.

It places before you, in its columns, reading matter that will help you to secure better yields from your soil and leads to greater development in your live stock operations; also presents, through its advertising columns, products that will be helpful to you in your farm work and farm housework.

It is a paper to be read with interest by every member of your family—it has a department for each one of the household.

Read the special offer made to the customers of the J. Steckler Seed Co., Ltd., on the opposite page.

We wish to be perfectly frank with you; we could not mail this paper twenty-four times a year for the sum of 25 cents except for the advertising contained in it. And catch this—you can feel perfectly free and easy in answering advertisements that appear in Modern Farming, for we will not accept fake advertising, no matter what price or inducement is offered us.

Write for sample copy of Modern Farming by to-day's mail. Look it over immediately and see if you can afford to be without this *your home paper*.

Send Twenty-Five (25) Cents to the J. Steckler Seed Co., Ltd., for one year's subscription. Do this to-day, or else you may forget it. Write your name and address plainly so there will be no delay in your receiving the paper.

Then when you need special farm or live stock information and do not find it in our paper, write us to furnish it, for we want to serve you in every way that we can.

Could you find a better investment? Could you find any source of information that will help you in this way just quite so cheap?

Yours for better agriculture,

MODERN FARMING
NEW ORLEANS, LA.

We Offer, by Special Arrangement with the Publishers

MODERN FARMING

A Real Southern Farm Paper

at Half Price, 25 Cents for a Year's Subscription.

Up to a few months ago this paper regularly sold for \$1.00 per year; lately it was reduced to 50 Cents.

FARMERS MUST READ

the Right Sort, the Reliable Kind of Farm Paper, if to Keep Pace with the Crop Diversification Needs of These Times. This you secure in MODERN FARMING, and by the Most Liberal Offer stated above, at a cost amounting to practically nothing.

MODERN FARMING

is edited by leaders in our agricultural and live stock world. It is for the farmer, dairyman, trucker, stockman, gardener and poultryman. You will be delighted with it and be glad we were able to make this arrangement with the publishers whereby we can offer you so much highly profitable reading at so small a cost.

MODERN FARMING

is published in New Orleans, being an old established and high-class farm paper for the practical farmer. It is attractively illustrated and comes out twice a month—24 numbers for your 25 Cents. And remember, this offer holds good whether you buy seed from us or not. You have seldom had a chance to get so much for your money. Let's have your order for the paper now. Send it to us.

J. STECKLER SEED CO., Ltd., New Orleans.

Send us the 25 cents; we'll do the rest.

We Accept Stamps.
